

SAFETY GUIDANCE

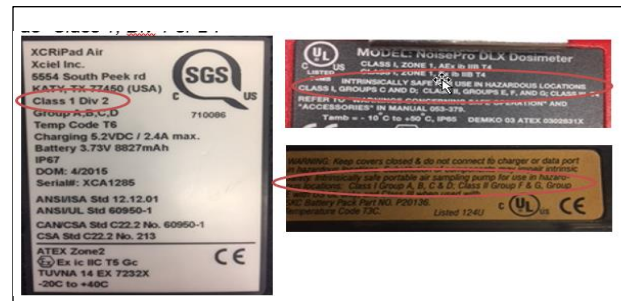

Clarification of Cell Phone Use in Process Units

The following is a clarification of Cell Phone Use in process units within Standard HSS-262 Entering Operating Areas:

- The use of **non-intrinsically safe cell phones is prohibited** within process areas at all times.
- Intrinsically safe cell phones such as iPhones in the *MPC Rugged Case* (engraved with MPC or with a sticker applied) and those with the appropriate intrinsically safe factory labeling are allowed to be used in the process units if they have been approved by MPC management.
- Use of an intrinsically safe cell phone in a process unit shall be for LAR business purposes use only.
- **Contract workers** are not allowed to use cell phones in process units even during turnaround conditions.
- **Contractor Supervision** can only use a cell phone in process areas if they have filled out a **cell phone use form** that is approved by their MPC sponsor and the MPC Safety Manager. Such devices must be contract company provided and have an appropriate sticker applied (see below).

Any electronic device such as a phone that is factory labeled for "Intrinsically Safe or Explosion Proof"

The MPC Rugged Case with certain iphone models

MPC approved cell phone in a case with the MPC approved sticker.

These are primarily for contractors and are available through the safety department, with a valid approval form, case, and proper documentation. See Mike Kulakowski for more information.

Please contact Safety Department with any questions.
